

## **John Jones Stretcher Bars**

---

We have two different depths of tulip wood stretcher bars. Both profiles include a quarter inch lip which gives the necessary clearance between canvas and underlying stretcher frame.

Profile	Depth	Width
Large	1¼ inch (34mm)	2 3/8 inches (60mm)
Small	7/8 inch	1¾ inches (45mm)

We recommend that a crossbar is added for lengths over 40" (101cm) to provide extra stability.

For example, for a 40" x 30" you would need 1 crossbar across the shorter length, whilst for an 80" x 60", you would need 2 short crossbars and 1 long crossbar.

We can increase the total depth of the stretcher bars by adding beading to the profiles. Beading is available in ¼, ½, ¾, 1, 2 and 3 inch depths and is also made from our specially selected tulip wood.

The following prices are for our standard size stretcher bars, although stretchers can be made to order in any shape and size. The largest single piece stretcher bar we can make is 12ft long - anything larger than this can be made in parts and joined with steel brackets.

Please contact one of our Artist Surfaces consultants for more information on 020 7281 5439.
